

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

On May 29, 1918, a bird which I am practically certain was of this species was encountered in a grassy swale not far from Pullman, Whitman County. When first sighted it was perched on a grassy tussock near the bottom of the swale. When flushed it flew to a grass clump some distance up a gentle hill slope, disappearing from view in the usual slinking fashion. Too much reliance cannot, of course, be placed on this record, since the bird was not secured.

On June 13 I noted the song of a Grasshopper Sparrow in a grain field near Six Mile Ranch, six miles south of Sprague, just over the line in Adams County. The bird was pursued for some time before it was finally taken. Its actions were as usually described, the bird characteristically dropping behind a grass tussock, ledge of earth or pile of brush, and then, with bill low, body in crouching position, and tail drooping, sneaking off through the grassy vegetation, refusing to flush until one was too close to shoot.

The bird is now No. 262090, U. S. National Museum, Biological Survey Collection. It is a male in much worn plumage.

These experiences during the past field season indicate that the Grasshopper Sparrow is probably more common in eastern Washington than has previously been supposed.—WALTER P. TAYLOR, *Biological Survey, Washington, D. C.*

**The Dickcissel in New Hampshire.**—At Concord, New Hampshire, on October 13, 1918 I shot a male Dickcissel (*Spiza americana*) in immature plumage. It was alone at the moment, in birches at the edge of woods that bordered extensive fields of corn and stubble, the autumnal resort of sparrows of several kinds, which were then swarming there among the weeds. The only records of the bird from north and east of Massachusetts with which I am acquainted are as follows:

Maine, September 29, 1884. C. W. Townsend (Auk, 1885, p. 106).

Maine, October 10, 1888. A. H. Norton (Auk, 1893, p. 302).

Nova Scotia, September 13, 1902. J. Dwight, Jr. (Auk, 1903, p. 440).

FRANCIS BEACH WHITE, *Concord, N. H.*

**Early Nesting of the Loggerhead Shrike *Lanius ludovicianus ludovicianus* at Savannah, Ga.**—I am indebted to Mr. Gilbert R. Rossignol, of Savannah, Ga., for the privilege of announcing the taking by him on February 15, 1919, at Savannah, of a nest and five eggs of the Loggerhead Shrike. Mr. Rossignol first discovered the birds building the nest in a live oak tree, among a cluster of vertical shoots, on January 16. The eggs were all fresh and the nest was approximately twenty feet from the ground.

In the vicinity of Charleston, S. C., the earliest dates upon which I have found eggs were on March 24, 1916, six eggs almost hatched, and March 13, 1917, five fresh eggs, both nests being found in the same live oak tree and doubtless belonging to the same pair of birds.—ARTHUR T. WAYNE, *Mt. Pleasant, S. C.*
